

ADD/MODIFY DETAILS

Modified on: Tue, 20 Aug, 2019 at 12:32 PM

Add/Modify Details

Add/Modify Details – for placing details in the frame. It is recommended to use these functions at the end of the framing process.

Recommended workflow: Create frame without details → Add additional elements → Split elements if needed → In the final step, add details. This will allow you to save time during the updating process when you frame a floor.

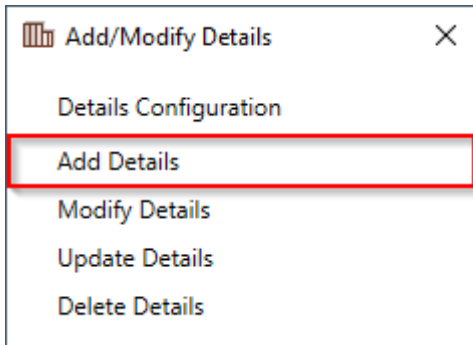

Details Configuration

Details Configuration – definition of all detail placing parameters.

Add Details

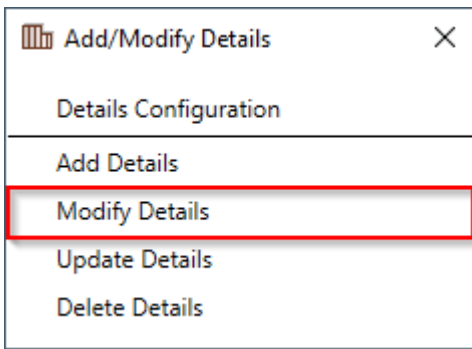

Add Details – adds details into selected floors according to predefined configuration. Recommended to use this function at the end of the framing process.

Recommended workflow: Create frame without details → Add additional elements → Split elements if needed → In the final step, add details. This will save time during the updating process when you frame a floor.

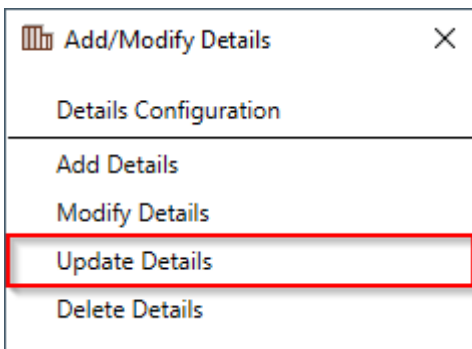

Modify Details

Modify Details – modifies selected floor details with custom settings if you need to make unique changes. All configuration settings are the same as in **Details Configuration**.

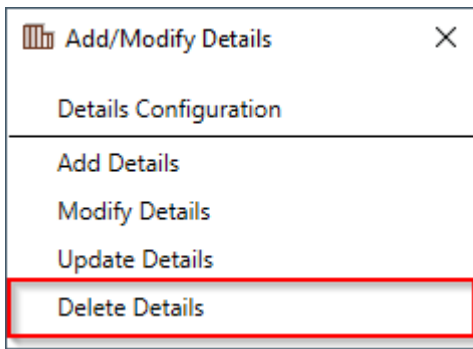

Update Details

Update Details – updates details if any changes were made to floor, e.g. opening was moved, floor was extended, etc.

Delete Details

Delete Details – deletes details from selected frame.
