Add Secondary Frame						
Add Siding						
Frame Additional Layers						
Multi-Framing						

Multi-Framing features work extremely well in big projects, like multi-storey houses.

An additional window opens that contains tools for multi-framing tasks. Multi-Framing is used when there are groups or identical walls in a given project. Using Multi-Framing tools you can easily transfer framing elements between identical walls and update them automatically.

# Filtering Rules in Model Groups

Show Primary & Secondary Assemblies	

**Model Group Type affects Wall's Identity** – sets filtering rules if wall's identity is affected by Model Group type. If ticked, only identical walls of the same Model Group type will be treated as the same wall.

Example: Identical walls are selected from the same model group type.

## Model Group Instance affects Wall's Identity

🖾 Wall+. Multi-Framing	$\times$

### **All Walls are Unique in Model Group** – lets you treat each Wall Framing individually. This function is recommended when some identical walls in Model Group need to be framed differently.

Example: Only one wall is selected from model group, which will have unique framing

# Copy/Update Frames in Model Groups

🖾 Wall+. Multi-Framing	$\times$
✔ Model Group Type affects Wall's Identity	
Model Group Instance affects Wall's Identity	
All Walls are Unique in Model Group	
Copy/Update Frames in Model Groups	
Copy/Update Frame in Model Groups

Update Frames by Wall Link in Identical Walls	
Delete Frames in Identical Walls	
Isolate Selected Walls	
Unhide Walls	
Create Assemblies for Identical Walls	
Disassemble Assemblies for Identical Walls	
Show Primary Assembly	
Show Primary & Secondary Assemblies	

**Copy/Update Frame in Model Groups** – copies and/or updates all frames from selected Model Group into identical walls from the same Model Groups.

#### MULTI-FRAMING : AGACAD

This feature helps save time because you will not need to frame walls from the same model groups individually. You just need to frame walls from one group and then, using this feature, copy/update it to other identical walls from the same groups.

# Copy/Update Frame in Model Groups

🖾 Wall+. Multi-Framing	<

Disassemble Assemblies for Identical Walls	
Show Primary Assembly	
Show Primary & Secondary Assemblies	

Show Identical Walls - selects and shows identical walls in the project according to Model Group filtering rules.

Identical walls are those walls that are identical according to their geometry.

# Copy/Update Frames in Identical Walls

	Show Primary & Secondary Assemblies	

**Copy/Update Frames in Identical Walls** – copies selected Frame or Secondary Frame into identical walls and/or updates existing Frame of identical walls. All changes will be transferred and overwritten according to the filtering rules.

Identical walls can be in the group or not.

#### MULTI-FRAMING : AGACAD

This function is recommended when a primary wall is framed (with all additional elements if needed) and all identical walls need to be framed according to the primary wall.

# Frame and Copy/Update in Identical Walls

Show Primary & Secondary Assemblies	

**Frame and Copy/Update in Identical Walls** – frames selected wall according to its Framing Configuration and then copies selected wall's Frame into identical walls and/or replaces existing Frame of identical walls. All framing elements will be transferred and overwritten according to filtering rules.

Identical walls can be in the group or not.

This function is recommended when all identical walls have to be framed only according to the **Framing Configuration** and manually-placed elements or modifications are not needed.

**Update Frames in Identical Walls**
