

FRAME FLOOR – ADD MAIN FRAME

Modified on: Sun, 3 Jan, 2021 at 7:51 PM

Frame Floor

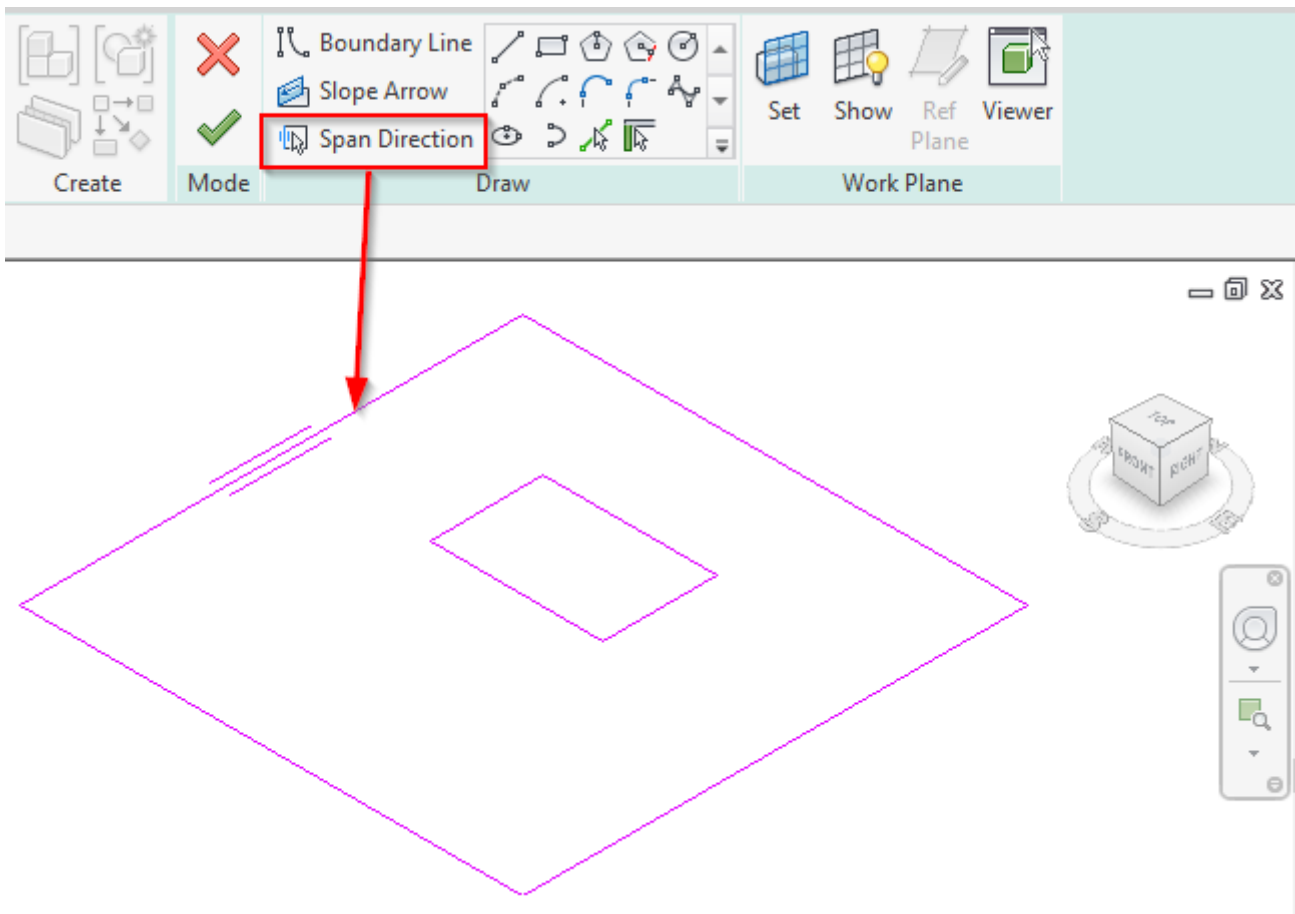

Or:

Frame Floor – frames selected floors or parts from the model according to predefined configuration.

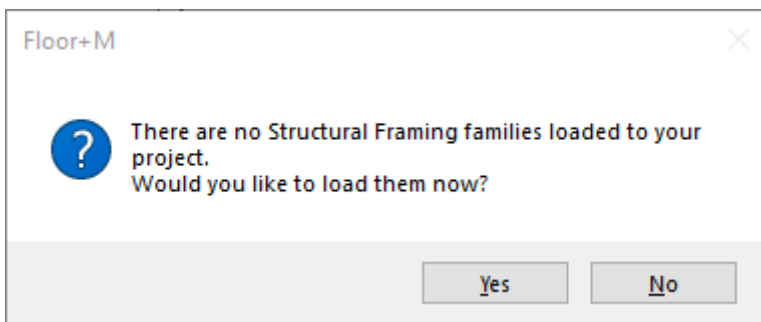

*Note: frame direction depends on the **Span Direction** in the Floor Boundary:*

First time in the project

The first time you click **Frame Floor** in a new project, you will get a message that the framing families are not loaded. You can load them directly from here:

Just click OK:

Select Family Catalogs for Loading

Catalog Name	Load
Main Families	<input checked="" type="checkbox"/>
Sample Details	<input type="checkbox"/>
Sample Schedules	<input type="checkbox"/>
Sample Tags	<input type="checkbox"/>

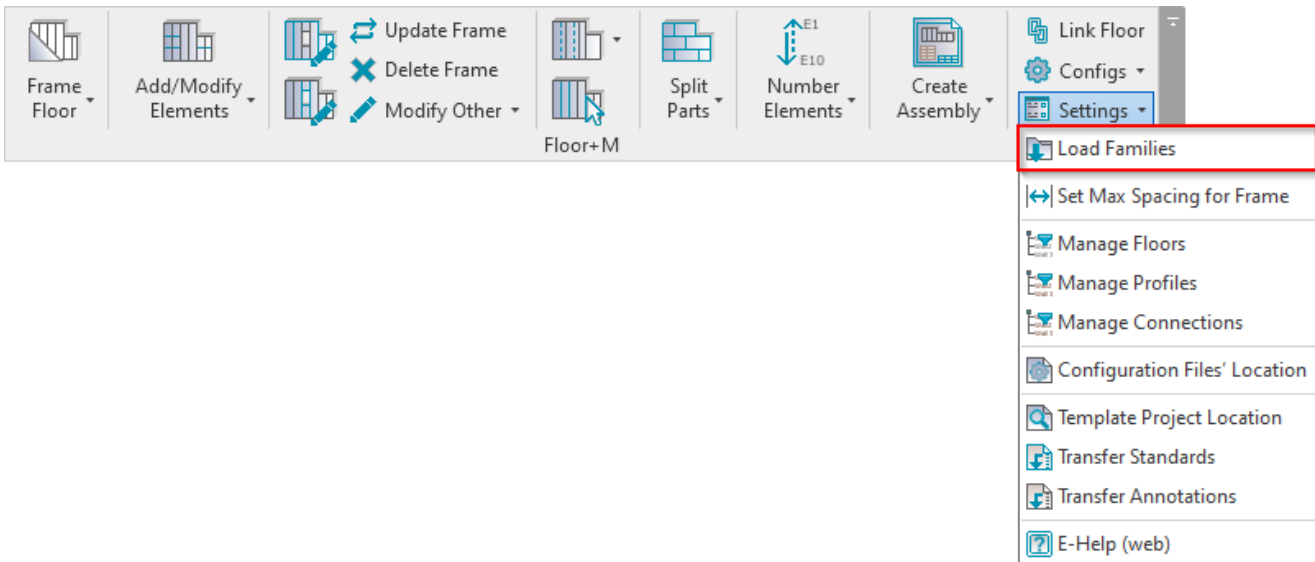

Notes

Company Catalog Name	Browse	Load
	Browse..	<input type="checkbox"/>

Overwrite Parameters

Load Additional Types Cancel OK

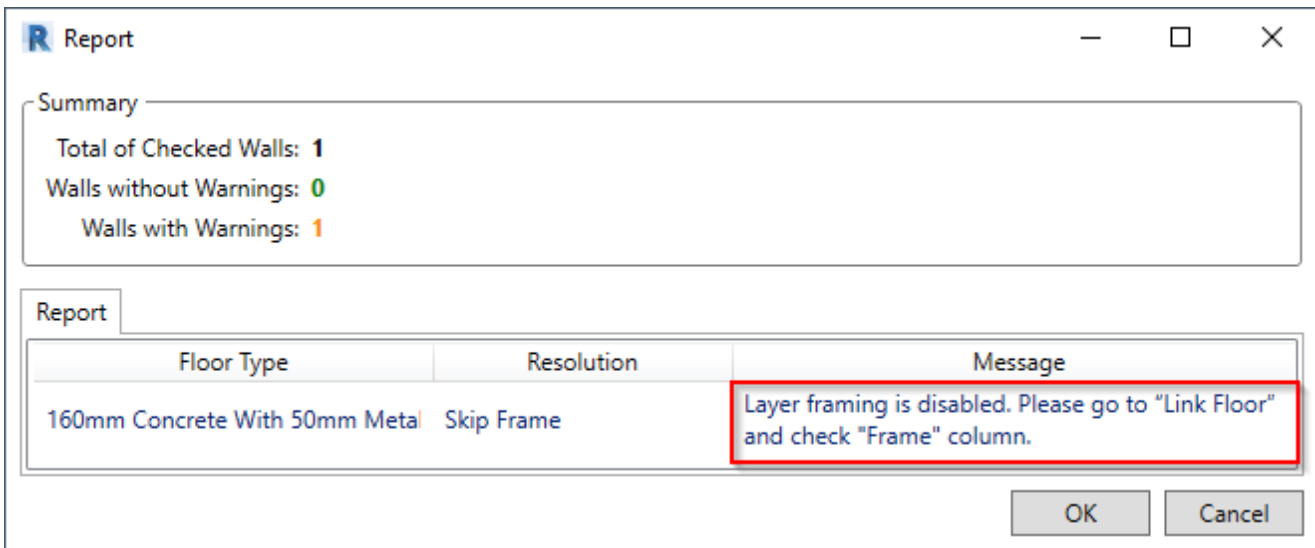

Framing families can be also loaded using **Floor+M** → **Settings** → **Load Families**:

[Read more Load Families>>](https://agacad.freshdesk.com/support/solutions/articles/44001794352-load-families) (<https://agacad.freshdesk.com/support/solutions/articles/44001794352-load-families>).

Floor+M checks the status of selected floors. If there is something wrong with the floors, you will get a detailed report. In the image below, you can see possible report messages.

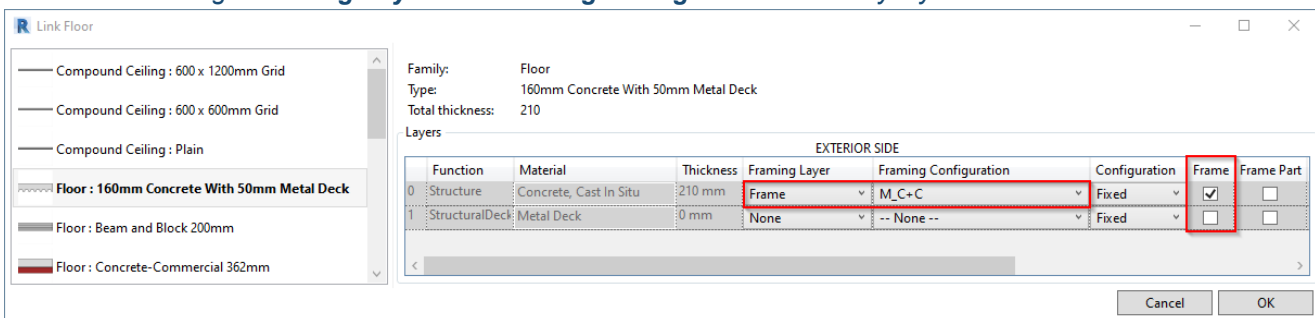

Let's solve the problem:

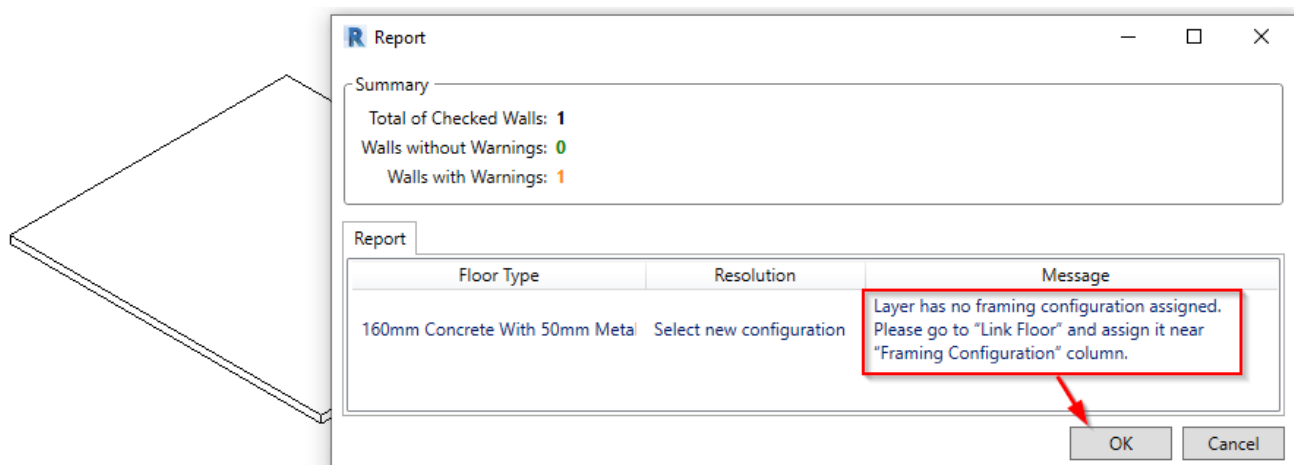

To fix these kinds of problems, you usually need to go to **Link Floor** and check the situation:

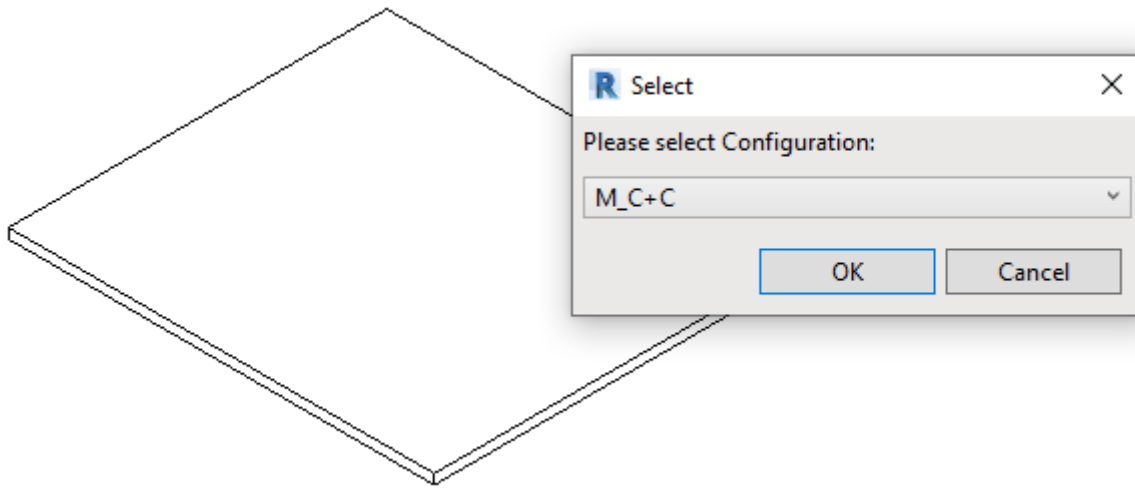

Selected floor type has framing possibility disabled, so you just need to select the checkbox near the **Frame** column. You can also assign **Framing Layer** and **Framing Configuration** for every layer:

There is no problem if framing configuration is not assigned to the layer. You can assign it in the **Link Floor** dialog, or **Floor+M** will give you this option during the **Frame Floor** process:

Selected a sample framing configuration, which automatically comes with **Floor+M**, and click **OK**:

Result:
