How to Use a Sample Project

Modified on: Mon, 22 Jun, 2020 at 10:00 AM

1. Select element or Host. Click Modify. Configuration window will open. Save configuration to your computer or simply review configuration settings.

2. Use Saved configuration in Sample project.

- 3. Set Sample Project as Template project and use saved configuration in new Project. See help file about Template Projects.
- 4. Edit Families and learn how they are created, how Special parameters are used. See help file for Special Parameters.
