Delete

Modified on: Mon, 22 Jun, 2020 at 11:11 AM

There are few different commands to delete elements.

Delete Elements - will delete all elements inserted with Smart Connections. Manually placed elements will not be deleted.

Delete Selected - you have to select one element and this command will delete all of inserts from that one Detail Priority tab. All the others will remain.

Delete All - will delete all hosted elements, both manually placed and placed with Smart Connections.

Delete w/o Host - will delete all details that have lost their hosts.
