

## Update and Update by DC

Modified on: Tue, 1 Jun, 2021 at 10:35 AM

**Update Assemblies** – updates selected assemblies using configuration and it's modifications, which were used on the Assembly.

**Note:** Position and Far Clip Offset values will stay as they were before using this command.

**Note:** If no assemblies have been selected, Update Assemblies window will be opened.

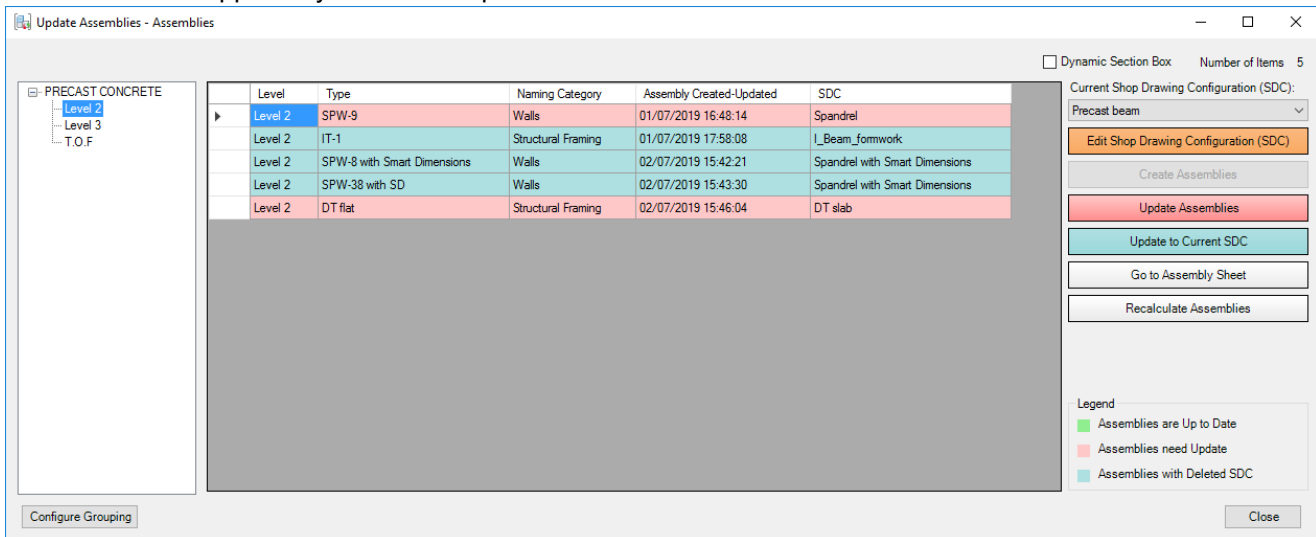

**Update by DC** – updates selected assemblies using default/global configuration settings, which were used on the Assembly.

**Note:** position for **Detail Sections** and **Plan Detail** views will be copied from views which is on the **Template Sheet**.

**Far Clip Offset** values for all views will be copied from views which is on the **Template Sheet**.

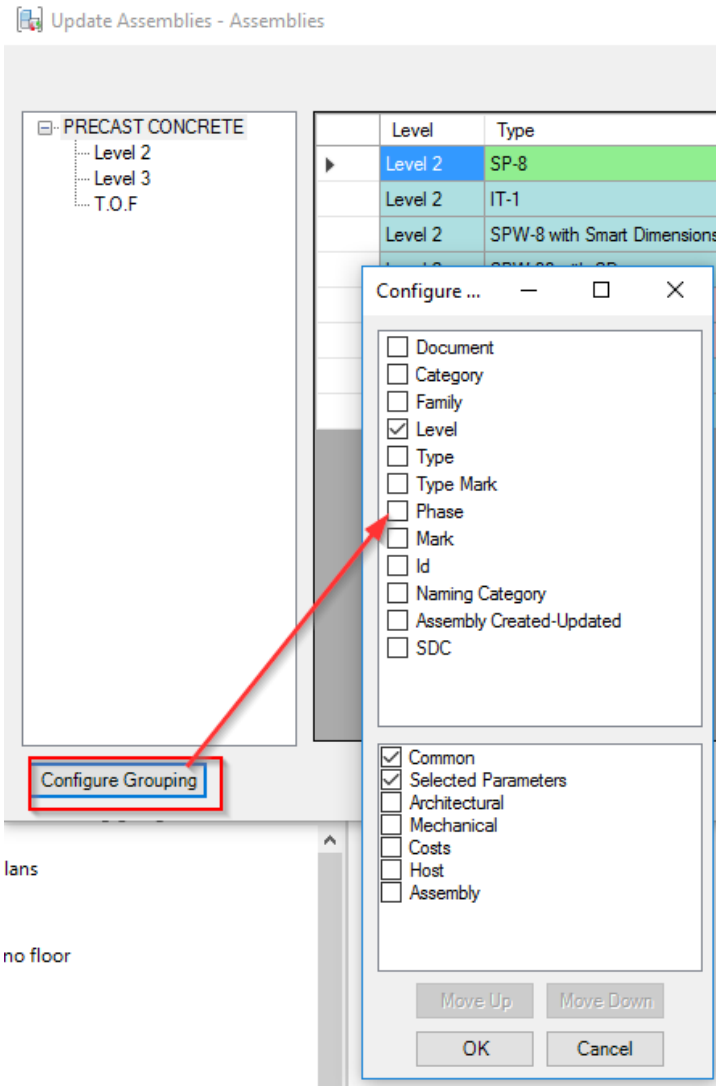

**Note:** It will remove modifications made by Modify SDC by Instance command.

This window will appear if you click on Update Assemblies when none of the assemblies are selected:

In this window you can see all assemblies created in the open project.

You can group them by selected parameters:

Overview status, Go to Assembly Sheet, Edit, Update, or Recalculate Assemblies by selecting them from the list.

Level	Type	Naming Category	Assembly Created-Updated	SDC
Level 2	SP-8	Walls	19/05/2020 16:38:31	Spandrel
