**Use Main Types** – brace family and type will be taken from **Common Settings** tab.

**Type** – select the family and type that will be used for the brace. Default families are predefined.

**Width (b)** – shows b size of selected type.

**Depth (h,d)** – shows h or d size of selected type.

**Define Depth (h,d) by Layer Thickness** – Wall+/Floor+/Roof+ will automatically create new type for selected family with new depth equal to selected wall/floor layer thickness.

## Rotate 90° and 180°

**Rotate 90°** – if ticked, then bracing rotates by 90 degrees.

**Rotate 180°** – if ticked, then bracing rotates by 180 degrees. Rotation depends on how the profile in the family is created.
